Exp: 2 Conversion From Regular Expression To NFA

Husna Qasim RA1911031010138 CSE-IT (L2)

AIM: -

To write a program for converting Regular Expression to NFA.

ALGORITHM: -

- 1. Start
- 2. Get the input from the user
- 3. Initialize separate variables and functions for Postfix, Display and NFA
- 4. Create separate methods for different operators like +,*,.
- 5. By using Switch case Initialize different cases for the input
- 6. For ' . ' operator Initialize a separate method by using various stack functions do the same for the other operators like ' * ' and ' + '.
- 7. Regular expression is in the form like a.b (or) a+b
- 8. Display the output
- 9. Stop

PROGRAM: -

your regular
expression : ') len =
